

Module Details	
Module Title	Vehicle Design Analysis
Module Code	MAE6017-B
Academic Year	2024/5
Credits	20
School	School of Engineering
FHEQ Level	FHEQ Level 6

Contact Hours	
Type	Hours
Lectures	36
Directed Study	164

Availability	
Occurrence	Location / Period
BDA	University of Bradford / Semester 2

Module Aims
<p>To develop a systematic knowledge and understanding of key principles related to automotive design, engineering and technology to understand the motor vehicle as a system.</p> <p>To apply the theory, methods and techniques necessary to solve problems associated with the design and operation of the component parts of the vehicle engine, drivetrain, suspension, and body systems.</p> <p>To introduce the legislative and environmental context of vehicle design and operation.</p>

Outline Syllabus
<ol style="list-style-type: none"> 1. Automotive Engineering overview 2. Road Loads 3. Acceleration behaviour 4. Brakes and braking 5. Tyres and cornering 6. Hybrid and Electric vehicle powertrains 7. Clutches 8. Gearboxes and gearing 9. Power cycles 10. Suspension 11. Steering

Learning Outcomes	
Outcome Number	Description
01	Apply the underpinning scientific and physical principles relating to the design and analysis of the motor vehicle and its major components
02	Describe and evaluate developing technologies related to automotive engineering.
03	Use the results from engineering analysis to solve vehicle engineering problems and to recommend appropriate action.
04	Use experimental data and engineering analysis techniques in the solution of unfamiliar problems.
05	Manage, present and interpret data using improved IT skills.

Learning, Teaching and Assessment Strategy
<p>The basic subject matter is introduced by lectures and seminars using hardware examples and lectures from practitioners. Topics cover the science, technology and principles of automotive engineering in the context of the major mechanical systems. Directed study takes the form of background reading to deepen the understanding of the material. Technical knowledge is consolidated by project work with the completion two pieces of written coursework focussing on the calculation and analysis of vehicles and their systems (Learning outcomes LO1-5), allowing students to demonstrate their depth of knowledge in the subject matter.</p> <p>Supplementary assessment is to repair deficiency in original submissions. Formative Assessment is enabled via an online assessment with immediate solutions enabling self-evaluation and identification of areas for support.</p> <p>This module satisfies the below Learning Outcomes as specified by the Accreditation of Higher Education Programmes: Fourth Edition (AHEP4) as published by the Engineering Council in-line with the UK Standard for Professional Engineering Competence (UK-SPEC). These outcomes specify five key areas of learning which partially (C) or fully (M) meet the academic requirement for CEng registration: Science and Mathematics (1), Engineering Analysis (2-4), Design and Innovation (5-6), The Engineer and Society (7-11), and Engineering Practice (12-18). Further details of these learning outcomes can be found at https://www.engc.org.uk/ahep/</p> <p>M1, C1, M2, C2, M3, C3, M4, C4, M5, C5, M7, C7, M12, C12, M16, C16, M17, C17, M18, C18,</p>

Mode of Assessment			
Type	Method	Description	Weighting
Summative	Coursework - Written	Coursework 1 (2500 words)	50%
Summative	Coursework - Written	Coursework 2 (2500 words)	50%

Reading List
To access the reading list for this module, please visit https://bradford.rl.talis.com/index.html

Please note:

This module descriptor has been published in advance of the academic year to which it applies. Every effort has been made to ensure that the information is accurate at the time of publication, but minor changes may occur given the interval between publishing and commencement of teaching. Upon commencement of the module, students will receive a handbook with further detail about the module and any changes will be discussed and/or communicated at this point.
